

Keystone System Requirements

Revised 8/31/2017

Stand-Alone System / Network Workstation

RAM	4 GB
Disk	10 GB free hard disk space (does not include space for database files)
CPU	Intel x86/x64 or compatible, 2 GHz minimum (dual-core+ recommended)
Display	1280 x 1024 or higher
OS	Windows 7 w/SP1, 8.1 or 10 (32-bit/64-bit)
Web Browser	Microsoft Edge or Internet Explorer 11 required

Network Server

RAM	8 GB (16 GB+ recommended)
Disk	10 GB free hard disk space (does not include space for database files)
CPU	Intel x64 or compatible, 2.5 GHz quad-core (Intel Xeon 3 GHz+ recommended)
Display	1280 x 1024 or higher
OS	Windows Server 2008 R2 w/SP1, 2012 R2 or 2016

Please contact GivenHansco IT (800-548-9754) to discuss your specific server hardware requirements before purchasing!

Important Notes:

- Windows 2000, XP, Server 2003 and Vista are NOT supported.
- Windows Server Essentials (Small Business Server) is NOT supported.
- Windows 7 and Server 2008 R2 require Service Pack 1.
- Windows 8 requires the Windows 8.1 Update.
- Though still supported by Keystone, be aware that Microsoft ended “mainstream support” for Windows 7 and Server 2008 R2 in January, 2015. We strongly recommend Windows 10 for new stand-alone/workstations and Windows Server 2012 R2 or higher for servers.
- Additional CPU cores and RAM will increase the performance of Keystone and other applications and are strongly recommended.
- Keystone FX and Datascope require additional RAM on each workstation where they are used.
- A reliable high-speed Internet connection is required at each separate location where Keystone is installed for support purposes.
- A hard-wired network connection is required for all servers and workstations. Workstations using wireless network connections must be configured to run Keystone using Remote Desktop to maintain data integrity.
